

COLLOQUIUM SERIES: SPRING 2016

OVERVIEW OF THE IOWA SOCIAL SCIENCE RESEARCH CENTER AND STATISTICS OUTREACH CENTER

Abstract:

The Iowa Social Science Research Center (ISRC) is a UI and community-wide resource for inter-disciplinary social science research. ISRC offerings include grant development support, data collection and management services and methodological consulting. An overview of the ISRC's services will be provided, detailing how the ISRC can assist researchers and students in: obtaining external funding, collecting primary data from diverse population targets and acquiring methodological support for data interpretation, data management and study planning.

The Statistics Outreach Center (SOC) was created to assist faculty, staff, and students with research design, data analysis, and interpretation. Our mission is fundamentally educational; we provide assistance to researchers to develop the skills needed to design their own research, conduct the analyses, understand the results, and communicate their findings to an audience. In addition to statistical consulting, the SOC offers statistical software training courses and seminars. Each semester we offer free short courses to help researchers from across campus get started with popular statistical software like SAS, SPSS, and R. We also offer training tailored to the needs of specific groups on request.
